

## ASAM PLACEMENT CRITERIA:

### *Not Just for Placement*

**March 23, 2018**

**(“snow date” March 29)**

The ASAM Patient Placement Criteria were developed to establish a common language and set of standards for determining the optimal level of care for a patient with substance use disorders. Acuity of symptoms rather than diagnosis drive the decision making process. In addition, the services provided at each level of care are identified. This workshop will provide a demonstration as to the use of the PPC-3 both for level of care determination as well as its use as a patient progress assessment tool.

### Learning Objectives:

At the end of the training participants will be able to:

- Utilize the PPC-3 as a means of communicating with patients and other agencies the rationale for placement referrals.
- Utilize PPC-3 Dimension V as a clinical tool that demonstrates patient motivation and progress in their identification of their role in their recovery(s)
- Identify through the use of the PPC-3 what additional services may be needed when a patient is not demonstrating expected progress.

### Who should attend?

- Clinicians
- Supervisors
- Interested Medical Providers

**There is no cost to register**
